

CoCo 2022 Participant: CSI 1.2.6

Fabian Mitterwallner and Aart Middeldorp

Department of Computer Science, University of Innsbruck, Austria
fabian.mitterwallner@uibk.ac.at, aart.middeldorp@uibk.ac.at

CSI is an automatic tool for (dis)proving confluence and related properties of first-order term rewrite systems (TRSs). It has been in development since 2010. Its name is derived from the Confluence of the rivers Sill and Inn in Innsbruck. The tool is available from

<http://cl-informatik.uibk.ac.at/software/csi>

under a LGPLv3 license. A detailed description of CSI can be found in [5]. Some of the implemented techniques are described in [1,4,7]. CSI can also produce certificates for confluence results, which are checked by CeTA. Compared to last year's version, CSI 1.2.6 can now produce certificates containing proofs based on development-closed critical pairs, which is a sufficient condition for confluence of left-linear TRSs [6]. These can be checked by the latest version of CeTA [3], due to the formalization and certification efforts by Christina Kohl, parts of which are described in [2].

CSI participates in the following CoCo 2022 categories: CPF-TRS, NFP, SRS, TRS, UNC, and UNR.
