Description

- CONFident is a tool for checking **(non-)confluence** of Generalized Term Rewriting Systems (GTRSs).
- A GTRS is a tuple $\mathcal{R} = (\Omega, \mu, H, R)$, where:
 - $\Omega = (\mathcal{F}, \Pi)$ is a signature with predicates.
 - $\mu \in M_{\mathcal{F}}$.
 - H is a set of auxiliary clauses (H is used to model the semantics of conditions).
 - R is a set of rewrite rules $\ell \rightarrow r \Leftarrow c$.
- This year, our participation involves utilizing the same tool employed in the previous year.
- In the bibliography, you can find new publications on some techniques that were unpublished last year.

An Example

- Consider the GTRS \mathcal{R} :

$$\begin{array}{ll} x \geq 0 & \text{odd}(x) \Leftrightarrow x \rightarrow^* s(0) \\ s(x) \geq s(y) \Leftrightarrow x \geq y & \text{zero}(x) \Leftrightarrow x \rightarrow^* 0 \\ \text{peven}(x) \Leftrightarrow x \rightarrow^* s(s(0)) & s(s(x)) \rightarrow x \Leftrightarrow x \geq s(0) \end{array}$$

- CONFident can prove the confluence of \mathcal{R} ... details in Salvador Lucas's talk!

Implementation and Bibliography

- It is written in Haskell and implements the **Confluence Framework**. The tool is available here:

<http://zenon.dsic.upv.es/confident/>
